

Digital Literacy Project Report

Name: sonu kumar

Registration Number: 25MEI10085

Branch: Int.Mtech cyber security

University: VIT Bhopal University

Course Code: CSE0001 – Digital Literacy

Introduction

Digital literacy is an essential skill in today's technology-driven world. It enables students to effectively use digital tools, communicate online, and stay safe on the internet. This project was completed as part of the CSE0001 Digital Literacy course at VIT Bhopal University. The objective of this project is to explore different aspects of digital literacy including online presence, coding platforms, professional communication, and cybercrime awareness. Through this project, I created an infographic on digital literacy, built professional profiles on online platforms, explored coding practice websites, wrote professional emails, and researched cybercrime prevention methods.

Task 1 Report

In this task, I created a digital literacy awareness infographic using Canva. The infographic explains the meaning and importance of digital literacy for students. It highlights key topics such as safe internet practices, useful digital tools, and maintaining a professional online presence. While designing the infographic, I focused on presenting the information in a

simple and visually appealing format so that students can easily understand the concept of digital literacy. One interesting aspect of this task was learning how visual elements and icons can make information easier to understand.

Task 2 Report

In this task, I created professional profiles on GitHub, LinkedIn, and Kaggle. GitHub is used to manage coding projects and share code with other developers. LinkedIn helps students build professional connections and explore career opportunities. Kaggle is a platform used for learning data science and participating in competitions. Creating these profiles helped me understand the importance of maintaining a professional online presence. In the future, I plan to use GitHub to upload my coding projects, LinkedIn to connect with professionals and explore internships, and Kaggle to improve my technical knowledge.

Task 4 Report

In this task, I explored coding practice and collaboration platforms. I created an account on HackerRank and solved a beginner-level programming challenge. This helped me understand how coding platforms can improve problem-solving and programming skills. I also created a Google Form quiz on digital literacy awareness. The form includes questions related to safe internet practices, digital tools, and professional online platforms. This task helped me understand how online collaboration tools can be used to create surveys and collect responses easily.

Task 4 Report

In this task, I learned about professional communication and email etiquette. I wrote two professional emails: one requesting an assignment deadline extension from a professor and another expressing interest in a summer internship opportunity. This task helped me understand the importance of writing clear subject lines, using polite language, and maintaining a professional tone in emails. I also created a social media do's and don'ts checklist to encourage responsible online behavior among students.

Task 5 Report

In this task, I researched cybercrime awareness and learned about UPI payment fraud. I discovered how scammers trick people into approving fake payment requests and stealing money. What surprised me most was how easily people can become victims if they are not aware of common online scams. This task helped me understand the importance of verifying payment requests and protecting personal information online.

Conclusion

This project helped me understand the importance of digital literacy in today's digital world. Through this project, I learned about professional online profiles, coding platforms, professional communication, and cybercrime awareness. These skills are very important for students and will help me in my academic and professional journey.
